UNIGLAS® | TAPE

Glazing Tape

The glazing tape speeds up fitting in wood windows and therefore saves time and money (new construction, renovation)

Advantages

- The fitter saves on work, time and salary expenses.
- The glazing tape is always laid right along the glass edge.

Properties

- Single and double-sided glazing tape applied along the glass edge in the colours grey and white for wood windows.
- Improves the glazing quality and creates the right space to attach sealing material.

UNIGLAS® | PROTEC

Glass Protective Film

The foil protects glass surfaces during construction and renovation work

Advantages

- Significantly easier cleaning of windows.
- Saves users extremely high costs on basic glass cleaning.
- Leads to a significant reduction in damage to glass surfaces.

Properties

- Single or double-sided protective foil, which is applied with a cutback of the customer's choice, usually 20 mm.
- The protective foil can also be manually removed without leaving behind any residue, even after 4 months and thus creates a surface, which is just as clean during insulated glass production as after the cleaning process.
