Interior - Design

www.uniglas.net

Almost unlimited colour possibilities are offered by the service MyColour by Lacobel for order sizes from 200m². Wall coverings and furniture can be perfectly coordinated with the design, brand or colour scheme of a company itself. It can even be written on like a blackboard.

Lacquered glass is a multifaceted material. It inspires in a manner equally diverse as the way it reflects light. Interior spaces gain depth, flow and perspective and minimalistically furnished interior decoration gains vibrant colour accents.

Craftsmanship with innovative brilliance: Versatility is the magic word in contemporary interior design: The old is combined with the new, celebrating timeless beauty in a composition of innovation and tradition. A covering made from pastel green Lacobel creates a neoclassical yet highly modern charm.

Lacobel is colour-coated on the rear side of the glass. This not only protects the coloured layer but also preserves the lasting brightness and brilliance of the colour. Lacobel is exclusively suited for use in interior areas such as wall coverings, interior furnishings or even blackboards.

Matelac is coated on one side and acid-etched on the other. The highly developed etching technique lends the glass a semi-matt look. Its opaque appearance comes from a high-quality application of paint to the rear side of the glass. Interior designers love Matelac because of its multifaceted possible uses for wall coverings, doors, tables, shelving and cupboards.

Advantages and Applications:

- Lacobel and Matelac are suited for diverse interior applications such as wall coverings, room dividers, furniture or doors. They offer a pure and modern appearance, are easy to clean and non-stain.
- All Lacobel and Matelac colours are suited for moisture-prone areas.
- A safety film on the lacquered side of the glass offers even more protection from injury and damage in the case of breakage of glass.
- The manufacturing method employed guarantees a consistent and faultless varnish application on the glass.
- Only environmentally friendly varnish is used for Lacobel and Matelac. In accordance with strong JIS test standards (JIS A 1460:2000), no formaldehydes were detected.
